RECOMMENDATION LETTER

Our company has been cooperating with KSK IT for many years on a range of joint IT and infrastructure projects.

Our companies operate in complementary technology areas. Our primary expertise is in structured cabling, low-voltage systems, and installation works, while KSK IT focuses on the design, implementation, configuration, and ongoing support of IT infrastructure.

Over the years, we have regularly involved each other in projects and referred clients to one another depending on the scope of work required — from cabling and site preparation to network configuration, server infrastructure, and ongoing IT administration.

In many projects, KSK IT has been involved in the launch of new sites on behalf of the client and has acted as a technical coordinator and supervisor. In this role, the KSK IT team coordinated the work of different contractors, monitored compliance with technical requirements, and ensured that the infrastructure was ready for launch and subsequent operation.

Throughout our cooperation, KSK IT has proven to be a professional and reliable partner, capable of coordinating complex technical projects, working effectively with multiple contractors, and taking responsibility for the final result.

We highly value our long-term cooperation and are pleased to recommend KSK IT as a reliable partner for IT infrastructure projects, new site launches, and technical project coordination.
